Backend & AI Engineer · Python · PostgreSQL · RAG / LLM Systems · AWS · Azure · Docker · GoLang

WORK EXPERIENCE

Rayvector Technologies

Bengaluru, Karnataka

Software Engineer (Full-Time)

Sept 2025 – Present

- Designed and shipped a production backend for a **Plot Management System** used by a multinational client — built with FastAPI, PostgreSQL, JWT auth, cursor-based pagination, and Redis caching to handle concurrent requests efficiently
- Led a full **Firestore-to-PostgreSQL migration**: redesigned APIs, database schema, and cloud infrastructure with zero downtime, reducing data-fetch latency and improving query reliability
- Containerized services with **Docker** and deployed on Azure VM behind an Nginx reverse proxy; managed DNS and production pipeline for two live environments
- Built a **RAG-powered AI documentation generator** using Gemini API and a 3-agent system (code analysis, writing, QA) that automatically produces structured DOCX/PDF docs from any codebase
- Developed and deployed a **Voting Platform REST API** on AWS EC2 with PostgreSQL, supporting full CRUD operations for production use

Software Developer Intern

May 2025 – Aug 2025

- Architected the initial backend for the Plot Management System using FastAPI and Firebase Firestore; implemented HS256 JWT authentication, Redis caching, and Docker-based deployment on Azure VM with Nginx

PROJECTS

TicketFlow | *Go, PostgreSQL, Redis, REST APIs, Docker*

Mar 2025

- Concurrent Event Management & Ticket Booking **REST API** in **Go**, JWT-based **RBAC**, Optimistic locking, Immutable audit trail, Redis rate limiting, ensuring **zero double-bookings** and **100% data integrity** during traffic surges.

SkillForge | *Python, AST Parsing, Multi-Agent Systems, Claude Skills, MCP*

May 2026

- Procedural memory layer for AI coding agents that distills LLM-generated bug fixes into reusable Claude Skill files via AST-based retrieval and human-gated approval, achieving $\sim 50\times$ **token reduction** ($\sim 3000 \rightarrow \sim 80$) on repeat-class errors

Market Research AI | *Python, LangChain, Gemini API, TypeScript*

Jan 2025 – Feb 2025

- Built a multi-agent AI tool that automates **95% of market research workflows** — scans 1000+ data points, generates company reports, and produces investment proposals for the GenAI/LLM sector

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Go, SQL

Backend & APIs: FastAPI, Node.js, Express.js, GraphQL, RESTful APIs, JWT Authentication, Redis Caching

Databases: PostgreSQL, MongoDB, Firebase Firestore, Redis, Database Optimization, Connection Pooling

Cloud & DevOps: AWS (EC2, Lambda), Azure (VM, Blob Storage, Flexible Server), Docker, Nginx, Linux, CI/CD

Frontend: React, Next.js, TypeScript, Tailwind CSS

AI/ML Tools: LangChain, OpenCV, TensorFlow, RAG, Gemini API, OpenAI API, Mistral API, Multi-agent Systems

Developer Tools: Git, Docker, Postman, VS Code, Cursor, Claude Code, Puppeteer, Selenium, PyPDF2, Matplotlib

CERTIFICATIONS

Google – Orchestrate Complex Multi-Agent Workflows

Apr 2026

Multi-agent Systems, LLM Orchestration, AI Pipelines

Credential ID: 23424455

Databricks – AI Agent Fundamentals

Apr 2026

AI Agents, LLM Integration, GenAI

Credential ID: 178739338

EDUCATION

Rajiv Gandhi Institute of Petroleum Technology (RGIPT)

Bachelor of Technology in Computer Science and Engineering

Bengaluru, KA/Jais, U.P

Dec 2021 – June 2025
